

# MessageLock™

The AES Email Encryption and Zip  
Compression Add-In for Microsoft Outlook

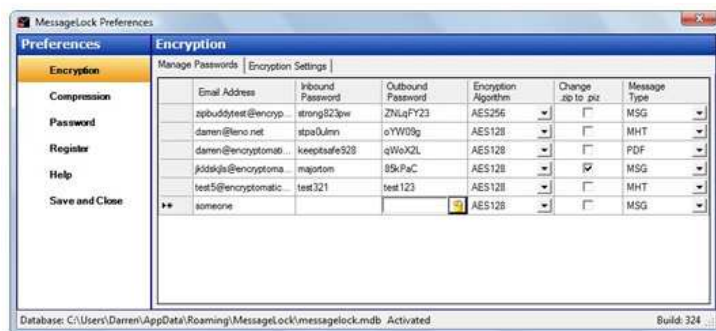

## Benefits

- Protect file attachments or the entire email message with strong AES-256 or AES-128 zip-compatible encryption
- Compress big files into smaller zip files from *inside Outlook*
- Supports legacy Zip 2.0 encryption format
- Send zip encrypted emails to multiple recipients or to a group
- Combine multiple big file attachments into a single smaller zip file
- Gathers your passwords as you send email, then recalls your passwords on future correspondence
- Create self-decrypting files
- Format email message as MSG, MHT or PDF

To begin using MessageLock, simply compose your email and then choose an option from the Outlook toolbar. If a password is required, MessageLock will ask you for it.

MessageLock's settings, stored passwords and configuration are easy to change.

## System administrators appreciate these MessageLock features:

- Distribute a "starter" password database and determine default settings
- Users can optionally be locked out of password settings
- User intuitive: very little training is necessary to use MessageLock
- Simple offline activation available on purchases of 100 licenses or more
- Silent install with command line key registration
- Install for all user accounts
- Multiple MessageLock installations can be activated online with a single key
- Saves bandwidth and space
- Seamlessly installs into Microsoft Outlook 2003/2007.
- Will not break your budget
